

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

Making each function have single responsibility so that the encapsulation can have less complexity and increase the readability.

---

2. What parts of encapsulating your logic were hard?

---

3. Is abstracting the book preview a good or bad idea? Why?

- Abstracting book preview is good idea as it allows for reusability and maintainability. So in can where we have to append more books on the fragment we won't have to re-write a function again but we can just call it.
